

Project Overview

In 2004 the State Government committed \$33 million to provide a Smart Bus service between Rowville and Caulfield, primarily using Wellington Road.

The Wellington Road Smart Bus is a new limited stop express service which will compliment existing bus services in the area providing:

- increased frequency of bus services
- improved reliability
- real time information at bus stops
- longer hours of service
- on-time bus services through the use of intelligent systems that respond to traffic conditions

Upon completion in 2008 over 4,500 m² of specific bus lane coloured treatment was installed along the Wellington road route to provide visual bus lane delineation in the City of Monash.

Delivered in partnership by Vic Roads and the Department of Infrastructure Vic Roads Eastern Projects engaged local contractors to install the OMNIGRIP CST surfacing system dressed with the unique Synthite Coloured aggregate.
